Making the Case: Quality Afterschool Programs Matter

Program Quality – The Key to Positive Outcomes

There is broad agreement that afterschool programs can play a significant role in supporting the development of young people. But to do so it is critical that the program be of high quality. A high quality afterschool program can have strong positive effects on children’s academic, social, and emotional lives and this can be especially true for at-risk youth. Some research suggests that what students do during the out-of-school time hours has as much bearing on their success as what they do during the school day.¹

Child and adolescent development unfolds in dramatic and predictable ways. Development is influenced by family, community, and the support and guidance available. In order for children and youth to succeed and sustain a positive and healthy trajectory through adolescence and young adulthood, they need support across a range of developmental outcomes. These five domains can be summarized as cognitive/academic; vocational; physical; social/emotional; and civic/cultural development.² Afterschool programs can be one of the important contributing settings to providing the critical experiences and relationships in these domains that keep children and youth on a positive and healthy path to adulthood.

There is growing recognition that participation in high-quality afterschool programs is associated with better grades, work habits, task persistence, and social skills; and that benefits appear to intensify as children and adolescents continue their involvement over a succession of years.³ Recent reviews of afterschool program evaluations done on well-run and effective afterschool programs showed that participation in quality afterschool programs improved youths’ feelings of self-confidence, self-esteem, attitude towards school, school grades, achievement test scores, and reduced problem behaviors.⁴ Some of the most desirable features of learning environments—such as intrinsic motivation, flexibility, and multiple learning arrangements—are characteristics of quality afterschool programs.⁵ These findings point to the vital importance of investment in afterschool programs and the benefits of participation in high quality programs.

⁴ Durlak, J., & Weissberg, R. (2007). The impact of after-school programs that promote personal and social skills. Chicago, IL: Collaborative for Academic, Social, and Emotional Learning. In the Durlak and Weissberg study quality programs were identified as those that used evidence-based training approaches to promote personal and social skills. These approaches to skill development are: sequential, active, focused, and explicit (SAFE).
What Makes a Quality Program?

In recent years, close study of the afterschool field has begun to define what is needed for a young person to have a quality experience during the out-of-school time program hours. Quality afterschool programs incorporate what is commonly referred to as a youth development approach. This approach focuses on what children and youth need as they mature into responsible and caring adults. The National Collaboration for Youth Members defines the youth development approach as an engagement strategy which prepares children and youth “to meet the challenges of adolescence and adulthood through a coordinated, progressive series of activities and experiences which help them to become socially, morally, emotionally, physically and cognitively competent”.

High quality programs strive to incorporate a positive youth development approach into their programs by incorporating program features that maximize positive and healthy development. These program features align with the key features of positive developmental settings established by the National Research Council and Institute of Medicine: (1) Physical and Psychological Safety; (2) Appropriate Structure; (3) Supportive Relationships; (4) Opportunities to Belong; (5) Positive Social Norms; and (6) Support for Efficacy and Mattering.

Features of afterschool programs such as staffing, leadership, communication, planning, physical and financial resources, family and school relations, and programming can vary in quality and collectively contribute to the delivery of experiences to children and youth. Findings from the Massachusetts Afterschool Research Study (MARS) showed that program quality across the state of Massachusetts is uneven unrelated to geographic location, auspices, or program mission. Several recent studies including MARS, have shed light on the association between program features and high quality program experiences. From these studies we can summarize that the following program characteristics and features cut across all high quality programs and are the non-negotiables of program quality:

- More highly educated and highly paid staff.
- More highly educated program directors.
- Lower staff turnover.
- Smaller group sizes for activities and lower staff/child ratios.
- Good connections with schools such as understanding of school objectives, and good relationships with principals and teachers.
- Continuous program evaluation of progress and effectiveness.

• Use a variety of content delivery strategies such as engaging activities, opportunities for cognitive growth, and opportunities for child and youth autonomy.
• Have established clear goals.

**Ensuring Program Quality Through the Use of Standards**

Guidelines for establishing quality and measurement tools to assess program effectiveness do exist. Researchers assert that the “field is reaching consensus on a set of core practices, and has developed instruments that measure these practices.” Various states, municipalities and individual organizations have crafted standards to address program quality, build staff capacities, and ensure accountability. One well known example of quality standards are those developed in 1998 by the National Afterschool Association (formerly NSACA). These standards outline the best practices in out-of-school time programs for supporting and enhancing the overall development of children and youth ages 5-14 years. In almost all cases, standards address key areas such as environment, staff relationships, programming, and youth engagement.

Many programs use observational tools and other forms of program assessment to gather important information about how the program is doing and to identify areas of strength and areas for improvement. Researchers at the Forum for Youth Investment (2007) provide detailed information about seven tools that can be used to measure quality program practices and facilitate program improvement in the out-of-school time field. The assessment process can be done by the program or outside observers. In Massachusetts, 21st Century Community Learning Center programs utilize the Assessing Afterschool Program Practices Tool to measure program quality and practices.

**Investing in Quality**

In order to provide children and youth with the experiences they require to become productive citizens, a rich variety of high quality programs are needed to effectively meet the range of consumer preferences and provide expected child and youth outcomes. Today not all children and youth have access to high quality programs, and existing programs need better resources and incentives to reach and maintain quality. Polling data by Public Agenda found that parents in poorer families and those from minority backgrounds are far more dissatisfied than others with the quality of afterschool program options.

It is essential that current efforts to support children and youth during the out-of-school time hours emphasize program quality. The quality of an afterschool program is critical to reaching outcomes that are proven to be good for children and youth. The challenge facing the policymakers in Massachusetts is how to stimulate, support, and sustain program improvement towards the achievement of the agreed upon quality standards and practices. Increasing the state’s capacity to support high quality programs necessitates creating a comprehensive and sustainable

---

infrastructure that could bring together systemic features such as cross-agency approaches for serving children and youth ages 0-22, and investments in professional development strategies and continuous program improvement. Now is a critical moment for the state to assess its commitment to building the quality of afterschool program opportunities in the state, and strategically examine the related challenges and opportunities.
